

Human life cycle

The different stages of a human. It starts as a foetus -> baby -> childhood -> adolescence -> adulthood -> elderly.

Foetus

This is the name given to a baby at 4 weeks during pregnancy. The baby is around the size of a pea.

Adolescence

We all hit adolescence at different ages but most commonly between the age of 13-18. We become more independent as we grow towards being adults.

Gestation

The baby's growth in their mother's womb before they are born.

Mammal

A **mammal** is an animal that breathes air, has a backbone, and grows hair at some point during its life. In addition, all female **mammals** have glands that can produce milk.

Metamorphosis

A **metamorphosis** is a dramatic change that some animals and insects go through during their life cycles. The change is dramatic, and the baby stage looks very different from the adult stage.
