

**Rainforest:** A Rainforest can be described as a tall, dense jungle. The reason it is called a "rain" forest is because of the high amount of rainfall it gets per year. The climate of a rain forest is very hot and humid so the animals and plants that exist there must learn to adapt to this climate.

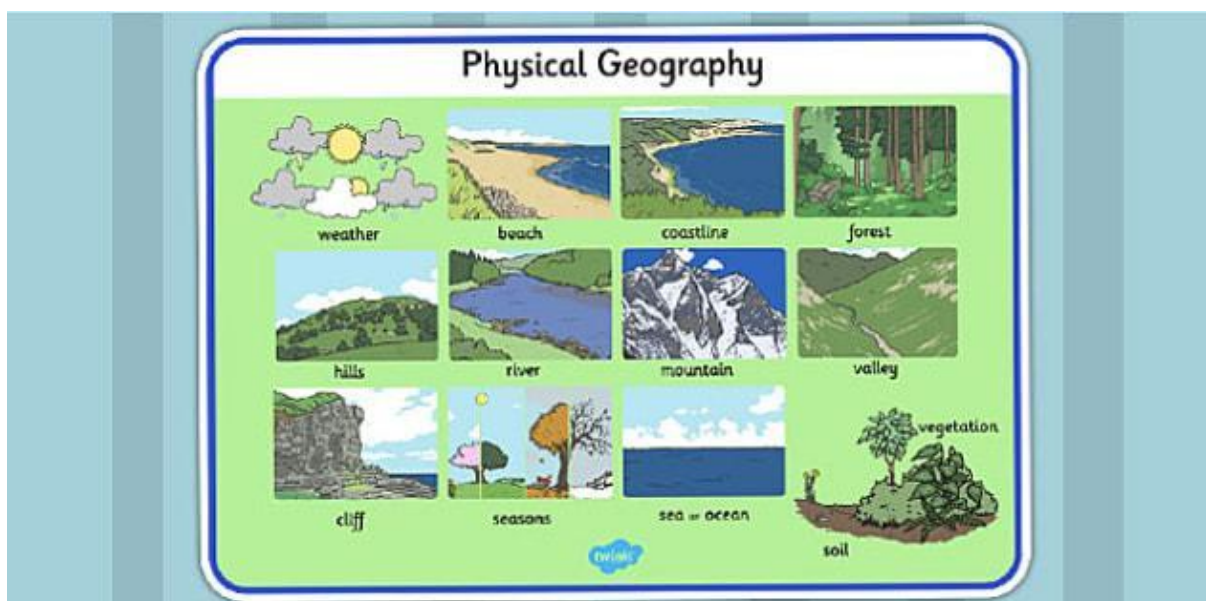

**Continent:** A continent is one of Earth's seven main divisions of land. The continents are, from largest to smallest: Asia, Africa, North America, South America, Antarctica, Europe, and Australia.

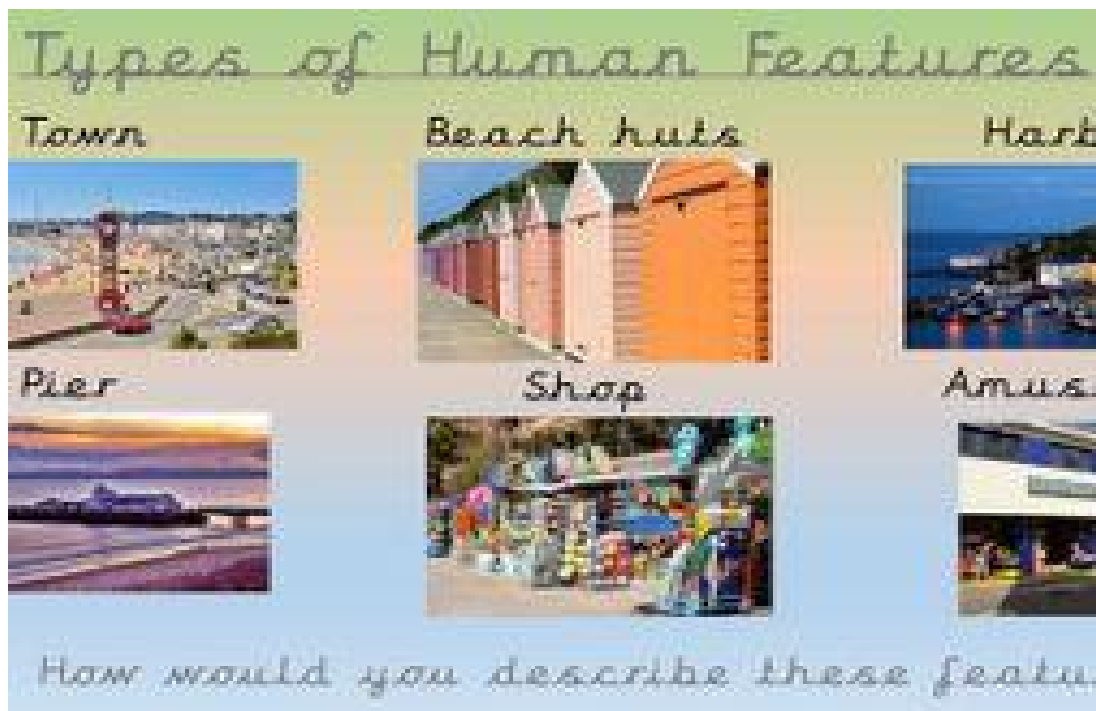

**Equator:** An **equator** is an imaginary line around the middle of a planet. It is halfway between the North Pole and the South Pole. An **equator** divides the planet into a Northern Hemisphere and a Southern Hemisphere.

**Physical Features:** The study of the natural **features** of the earth's surface, especially in its current aspects, including land formations, climate, currents.

**Human Features:** Something that is built by humans and would not have existed in nature without humans.

**Foliage:** The leaves of a plant or tree, or leaves on the stems or branches on which they are growing.

**Layers of the Forest:**

Layers of the Rainforest

## Habitats:

The natural home or environment of an animal, plant, or other organism.

# Habitats

**Tribe:** A group of people who are of the same kind or have the same occupation or interest.

**Settlement:** A place, typically one which has previously been uninhabited, where people establish a community.

**Deforestation:** The action of clearing a wide area of trees.

**Environment:** The surroundings or conditions in which a person, animal, or plant lives or operates.

**Recycling:** The action or process of converting waste into reusable material.

**Sustainability:** Using natural resources in a way that we could keep doing for a long time. We can be

more **sustainable** by reducing our use of natural

resources.

**Fairtrade:** Trade between companies in developed countries and producers in developing countries in which fair prices are paid to the producers.
