

<p>Ordnance survey</p>	<p>The Ordnance Survey (OS) is an organisation that creates maps of Great Britain.</p>	
<p>Topographic(al)</p>	<p>A topographic map uses elevation contour lines to show the shape of the Earth's surface - roads, railroads, rivers, streams, lakes, boundaries, valleys, mountains, the coastline and many more.</p>	
<p>Co-ordinate</p>	<p>Maps use co-ordinates. Around the edges of maps are numbers and sometimes letters, which define the location of cities, states and landmarks.</p>	
<p>Latitude</p>	<p>The measure, in degrees, of lines horizontally on a map.</p>	

<p>Longitude</p>	<p>The measure, in degrees, of lines vertically on a map. Sometimes, these lines are curved.</p>	
<p>Locality</p>	<p>A particular neighbourhood, place or region.</p>	
<p>Continent</p>	<p>A continent is a large solid area of land. Earth has seven continents.</p>	
<p>Ocean current</p>	<p>An ocean current is a continuous movement of ocean water from one place to another. Ocean currents are created by wind, water temperature, salt content, and the gravity of the moon.</p>	
<p>Climate</p>	<p>The weather found in a certain place over a long period. An area's climate determines what kinds of plants can grow and what kinds of animals can survive there.</p>	

<p>Tourism</p>	<p>When people travel for pleasure, they are called tourists. Tourism is the business of encouraging and supporting tourists.</p>	
<p>Hemisphere</p>	<p>A hemisphere is half of a sphere, or ball. People use the word to describe one-half of Earth. Geographers, or people who study Earth, have divided the planet into two sets of two hemispheres. These are the Northern and Southern hemispheres and the Eastern and Western hemispheres.</p>	
<p>Altitude</p>	<p>Altitude is how high something is compared to the ground, or sea level, and it is important because of how it can affect people.</p>	
<p>Prevailing winds</p>	<p>These are the trends in speed and direction of wind over a particular point on the earth's surface.</p>
