

Life cycle

A life cycle is a **series of stages** a living thing goes through during its life. All plants and animals go through life cycles.

Metamorphosis

A metamorphosis is a **dramatic** change that some animals and insects go through during their life cycles. The change is dramatic, and the baby stage looks very different from the adult stage.

Growth

Growth is an **increase in size**. Growth takes place when cells within a living thing increase in size and number. Throughout its life, a living thing continues to grow in different ways.

Pupa

A **pupa** is an insect that is in the stage of development between a larva and a fully grown adult. It has a protective covering and does not move.

Living things

All living things can move, using their own energy. Even though plants stay in one spot, they move their leaves to get sunlight. Living things are also sensitive, or able to feel. ... Green plants make their own food with the help of sunlight.

Animals eat plants and other animals to get energy.
